Same 12 fields. Rebuilt with a review step before send.

SPOT THE BUG 2/3

The review step looked right. What was wrong?

A. A required field was missing

B. Edits on step 3 never reached the review

C. The progress bar was wrong

Pick one before you swipe.

B. A visitor would have sent stale answers, sure they were right.

How WPOS caught its own bug

- It re-ran the whole flow instead of spot-checking
- Patched, then re-ran until all 12 answers updated live
- 5 of 5 required fields validating
- Submit is not wired on this demo, and the page says so
