

Unpopular opinion.

Your AI site builder is a hostage situation.

If the builder hosts the site,
the builder owns the exit.

Client wants to
change hosts?
Good luck.

When the site lives inside someone else's platform, moving it
is their call, not yours.

Your client paid for a website.
Not a subscription to one.

Their site.
Their WordPress.
Their host.

That is why WPOS works inside WordPress.

- ▶ How WPOS builds

- ▢ Native pages in the client's own WordPress
- ▢ On whatever host they already use
- ▢ Editable in Gutenberg, Elementor or Divi, by anyone on the team

Where should a client site live?

A. In WordPress, on the client's host

B. On an AI platform, if it is faster

C. Depends on the client
